DETAILED ACTION

Notice To Applicant

1. This communication is in response to the amendment filed on 08/3/2006. Claims 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, and 33 have been cancelled. Claims 1-4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, and 32 are in condition for allowance.

Allowable Subject Matter

2. Claims 1-4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, and 32 are allowed.

The following is an Examiner's statement of reasons for allowance:

3. Claims 1 is directed to a system for aiding to make a medical care schedule and/or record comprising:

- (a) a plurality of files each for including medical care data indicating one of a plurality of types of medical care actions, which are set in advance, in

- correlation with execution timing data indicating an execution timing of each one of the medical care actions;
- (b) a display controlling device for (i) generating first display data to display the medical care data composing the medical care schedule and/or record for one patient in a format of a medical care schedule and record table; (ii) arranging the medical care data in first rows for each type of the medical care actions and in second rows orthogonal to said first rows for each date, as for only part of the types of medical care actions for said one patient and as for only a partial period of a whole period of the medical care schedule and/or record for said one patient, on the basis of the medical care data and the execution timing data included in said files; and (iii) generating second display data to display a table identification mark information individually for each part of the types of medical care actions, which is to identify the medical care schedule and record table for said one patient, as a patient chronological table exclusive for said one patient in which the table identification mark information is arranged at a position corresponding to the partial period on a time axis indicating the whole period of the medical care schedule and/or record;
- (c) a display device for displaying the medical care schedule and record table on the basis of the first display data, and displaying the patient chronological table on the basis of the second display data; and

- (d) a selecting device for selecting one of a plurality of table identification mark information under a condition that the patient chronological table comprising the plurality of table identification mark information is displayed by said display device;
- (e) said plurality of files being correlated with one or a plurality of medical care schedule and record tables, each of which are identified by said plurality of table identification mark information and each of which can be displayed by said display device;
- (f) said display controlling device taking out the file or files correlated with the medical care schedule and record table identified by the table identification mark information selected by said selecting device, to thereby generate the first display data by using the medical care data stored in the taken out file or files;
- (g) one of said plurality of medical care schedule and record tables, which corresponds to the table identification mark information, being selected by said selecting device;
- (h) the selected one of the medical care schedule and record tables being displayed by said display device on the basis of the generated first display data.

The closest prior art of record, Kameda Medical Information Laboratory (EP 0 784 283 A1) teaches a system for generating a medical schedule, wherein a first flag is

generated if a medical care action was completed and a second flag if the medical care action was not completed.

Kameda does not disclose generating second display data to display a table identification mark information individually for each part of the types of medical care actions, which is to identify the medical care schedule and record table for said one patient, as a patient chronological table exclusive for said one patient in which the table identification mark information is arranged at a position corresponding to the partial period on a time axis indicating the whole period of the medical care schedule and/or record, as recited in claim 1.

4. Independent claims 30 and 32 recite the same limitations of independent method claim 1, but as a program storage device and a method, respectively. As such, the closest prior art of record, Kameda Medical Information Laboratory (EP 0 784 283 A1), neither discloses a program storage device nor a method that recites generating second display data to display a table identification mark information individually for each part of the types of medical care actions, which is to identify the medical care schedule and record table for said one patient, as a patient chronological table exclusive for said one patient in which the table identification mark information is arranged at a position corresponding to the partial period on a time axis indicating the whole period of the medical care schedule and/or record.

5. Dependent claims 2-4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, and 28 incorporate the features of claim 1 through dependency and therefore, are also allowed for the same reasons given above.

6. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delay, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
